

OUR SECURITY VALUE PROPS

Cybersecurity Leadership

We value ownership, strong ethics, and quality execution. We are committed to defending our community so small businesses can focus on serving their customers.

Bolster Your Business

Utilize our security expertise and cybersecurity bundle to maintain smooth operations, reduce your IT workload, prevent breaches, and adhere to compliance measures.

Real-World Threat Expertise

Our security team has real-world cyber operations experience, bringing you military-grade technologies and tactics.

24/7 MDR Protection

Our Managed Detection and Response solution provides 24/7 protection against even the most advanced of modern-day cyberthreats. Sleep easy knowing we guard your business around the clock.

Rapid Detection and Response

Faster than any other solution on the market, our world-class Security Operations Center (SOC) combines network visualization, tradecraft detection, and endpoint security to detect lateral movement in its earliest stages.

True, Action-Focused Approach

We detect and detain threats on your behalf immediately. By the time you hear from us, the threat has already been triaged and removed from your environment. Trust us to provide real action, not just notifications.

MDR

- **24/7 Monitoring** stops threats at any time, allowing you to grow your business and enjoy time away from the office.
- **Tradecraft Detection** stops brand-new breaches and advanced techniques, so you don't have to be afraid as new threats emerge.
- **True Response** means human experts are stopping attacks in real time, reducing your exposure and chance of a data breach.
- **Our Live Security Analysts** utilize robust technology to help you maintain productivity, instead of relying on mindless AI for your business' security.

Cloud RESPONSE

- **MDR for the Cloud** – Leverage our world-class detection and response technology to protect your cloud platform against advanced persistent threats.
- **Guided Onboarding** – With our simple onboarding process, you can start securing your cloud environment in one day.
- **Trust the Human Element** – Rather than dealing with noncontextual alerts on your own, our expert SOC analysts provide immediate response against threats for you.

Dark Web MONITORING

- **Enhance Customer Trust** – Gain visibility into threats you may otherwise be unaware of.
- **Minimize Risk Exposure** – Address compromised identities before they are exploited in an attack.
- **Gain Continuous Protection** – Stay up to date via automated scanning and alerts.

LogIC

- **Collect** – Efficiently collect key data needed to meet regulatory compliance requirements in future audits.
- **Store** – Safeguard your event logs with one year of complimentary storage that meets data storage requirements.
- **Map** – Easily map all your current security services to hundreds of compliance requirements.
- **Management** – On your behalf, we can manage settings and see events collected in real time.
- **Report** – Streamline how you prepare for audits. On your behalf, we create compliance reports for ultimate visibility.

MANAGED Application Control

- **Simplified Security Management** – Harness threat intel for a recommended application block list and our 24/7 SOC's management to immediately detect and block malicious requests based on our combined settings.
- **Increased IT Visibility** – Create custom rules for your various employees to gain visibility into device activity across extended perimeters. This will ensure devices are always properly configured.
- **Reduced False Positives** – Operate with elite security protection without interrupting your business' productivity with verification requests, false positives, and settings maintenance.
- **Increased Operational Efficiency** – Enable access to organizational resources and data from anywhere and from any device, while ensuring that all endpoints meet your security requirements.
